

# Day hospital chair ZeroG

Where time flies!

The **Day hospital chair ZeroG** was developed in response to the latest trends in **outpatient surgery** and **postoperative recovery**. With a design that enables **easy** and **safe transport** and **facilitates recovery** after surgery, the new ZeroG chair perfectly replaces both a standard patient transport trolley and a hospital bed. The chair was designed to **prepare** patients for surgery and make their **transport** from the operating room and **their rest** after surgery **safe and comfortable**.

## Easy access and preparation

The height of the Day hospital chair ZeroG is electrically adjustable by hand switch. One of the chair's key advantages is **low sitting position** that enables patients' easier access on the chair. **Integrated armrests** on safety rails allow the medical staff to prepare the patient for a surgery.

The chair can be set into **completely flat position**, so it is perfect for all patients' transfers from the Day hospital chair ZeroG to any OP table and vice versa. **Infusion stand**, which can be attached either on the left or on the right side of the chair, is always placed **vertically**, regardless of the chair's position.

## Exceptional mobility and agility

A wide range of smart and simple features enable easier pushing, turning and driving. The ZeroG day hospital chair has **castors with central locking system**, which are adjustable from both sides of the chair. To provide easier driving along corridors, excellent manageability and turning on the spot, the chair is additionally equipped with a **pair of fifth wheels**.

**Push handles** on optimal height at head section provide a safe grip during driving, while **bumpers** on the corners at leg section protect the chair and surrounding area from damage.

## Comfortable and safe recovery

Simple adjustments of the Day hospital chair ZeroG allow surgeons to safely transfer the patients onto the chair after surgery and place them into **optimal position for recovery**. Firm and solid **safety rails** on both sides of the ZeroG chair protect patients against falls.

The **extremely soft padding** and **simple adjustments** guarantee first-class comfort for patients during recovery after surgery. The patients can adjust the ZeroG chair **independently** into their favourable position. By pressing a single **"cloud" button** on a **hand switch**, they can set the day hospital chair into ZeroG position, the most comfortable position for resting. Anytime during recovery, the hand switch can be securely placed on **hand switch holder** that is integrated along with armrests on safety rails.

## Equipment and accessories

	DHCZ
height of the chair - upholstery included	58- 83 cm
height of the chair - upholstery excluded	44 - 69 cm
weight capacity	250 kg
