massage and physiotherapy treatments

reddot winner 2020

# MASSAGE AND THERAPY TABLES S

**SIMPLICITY** on one hand and **RICHNESS** on the other are the two distinguishable features of the renewed S-line design.

**Upgraded functionality** and continuation of the awarded design make massage and therapy tables the **perfect support** for different **massages, physiotherapy treatments and therapies**. The new features simplify the use and make tables even more **comfortable** for both patients and practitioners.

#### Head section

- breathing hole with with memory foam and matching plug
- welded and taped seams around the breathing hole preventing the penetration of massage oils and lotions
- practitioner's unhindered access under three-part head section
- a one-handed push down or up adjusts both armrests at once

#### Upholstery

- durable, seamless 8 cm thick padding with a two-layer foam
- wider lying surface due to the padding finished at a right angle

**Hand switch** includes CPR button for fully extended position and SOS button for Trendelenburg position.

#### Stronger control unit

- new software enables synchronous movement of table's middle two sections
- easier to replace

#### Table base

- ABS plastic cover is screwless for easier cleaning
- standard 250 kg weight capacity

#### Soft retractable system

Retractable castors include a shock absorber to soften the release of castors.

#### Circular switch

- simple up & down operation from all sides of the table
- height adjustment range between 48 and 96 cm

## So the cleaning becomes easier

To ensure **simple cleaning** and **high hygiene standards**, the **UPHOLSTERY** is **SEAMLESS** and made of **high-quality BIOCOMPATIBLE imitation leather**. **SEAMS** around the breathing hole are **WELDED** and **TAPED** to **prevent penetration** of any **liquids, massage lotions** and **oils** in particular. The **ABS plastic COVER** that protects the table base is **screwless** and thus completely **smooth**.

The head and leg section **ADJUSTMENT LEVERS** with a mechanism **integrated** in the frame are **easier to press** and **clean**.

## To maximize the comfort and ease the use

To maximize the patient comfort, the **8 cm thick PADDING** is made of **two-layer foam**. It is **durable and comfortable** along the **whole lying surface** which is now even wider due to the **padding finished at a right angle**.

The **BREATHING HOLE** with **memory foam** on the edges ensures perfect comfort in prone position. A **matching PLUG** is standard too. Optionally, tables can include a **THREE-PART HEAD SECTION** that allows **practitioners** an **unhindered access** when they treat patients seated at the head section. With the **NEW MECHANISM** for armrest adjustment, only a **push by one hand** is enough to lower or raise both armrests at once.

**Lowering** and **raising** massage and therapy tables by the new **CIRCULAR SWITCH** is as simple as it can be. From any side of the table, one can adjust height by **pressing** the switch **down** or **pushing** it **up** completely effortless. The height **adjustment range** is between **48** and **96 cm**.

The standard **WEIGHT CAPACITY** has been increased to **250 kg**, which contributes to the **perfect stability**. Practitioners can rely on the table even if they apply strong pressure during treatments. Due to the **NEW SOFTWARE** that enables **synchronous movement** of the middle two lying sections, they can **position** their **patients easier** and **quicker**. The **HAND SWITCH** includes two buttons for the **prestored** completely **flat** and **Trendelenburg positions** and a **memory function** to store a position of practitioner's choice. The table stands firmly on its **RUBBER FEET**. To move the table across the room, it features **RETRACTABLE CASTORS**. Due to the **shock absorber**, the release of the castors is softened.

## For various treatments, massages and therapies

The **BREATHING HOLE** with a **MATCHING PLUG** and **ELECTRIC HEIGHT ADJUSTMENT** are now the **standard equipment** of the renewed S-line massage and therapy tables. Two massage table models offer a **wide and comfortable lying surface** to perform massages and therapies. If treatments demand positions with negative section incline to allow the **Jackknife** or **Trendelenburg position**, 3-, 4- and 8-section therapy table models are available. The **fully equipped** Therapy table S8 standardly includes a **three-part head section** and **sturdier foldable side wings** integrated in the back section. Bobath table offers **WIDE SURFACE** for rehabilitation treatments. Now both, one and two-section model, include a **HAND SWITCH** to adjust the height and with a two-section Bobath the head section as well.
